

Youth Cigar Use

Results from the 2015 Mississippi Youth Tobacco Survey

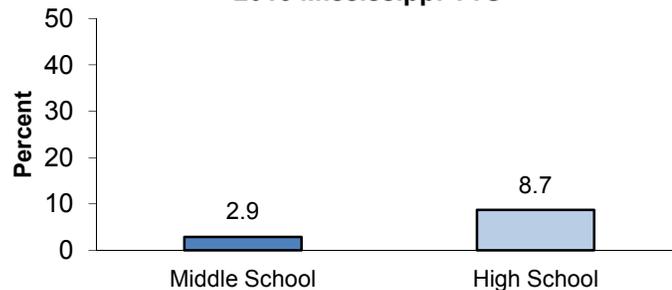

The Youth Tobacco Survey (YTS) was developed to enhance the capacity of states to design, implement, and evaluate their own tobacco prevention and control programs. The YTS comprises a state-approved core questionnaire designed to gather data about the use of tobacco products and related risk behaviors among Mississippi public school students. The 2015 Mississippi YTS was completed by 1,878 middle school students in 47 schools and by 1,641 high school students in 43 schools. The overall response rate was 79% in middle school and 68% in high school. The results represent the entire population of public middle and high school students in Mississippi.

Current Cigar Use

In Mississippi, 2.9% of middle school students and 8.7% of high school students reported current cigar use (Figure 1).

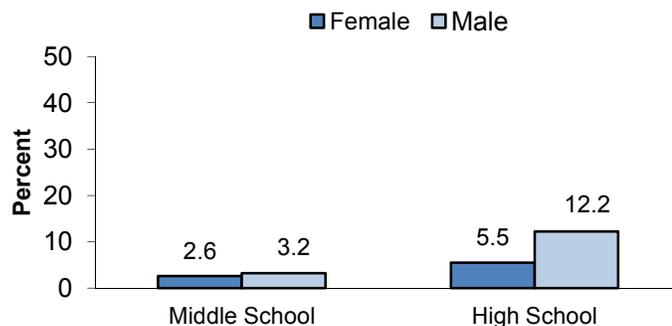

Figure 1. Current Cigar Use, 2015 Mississippi YTS

Current Cigar Use by Gender

- In middle school, the percentage of students who were current cigar smokers was 3.2% among males and 2.6% among females (Figure 2).
- In high school, the percentage of students who were current cigar smokers was significantly higher among males (12.2%) compared to females (5.5%) (Figure 2).

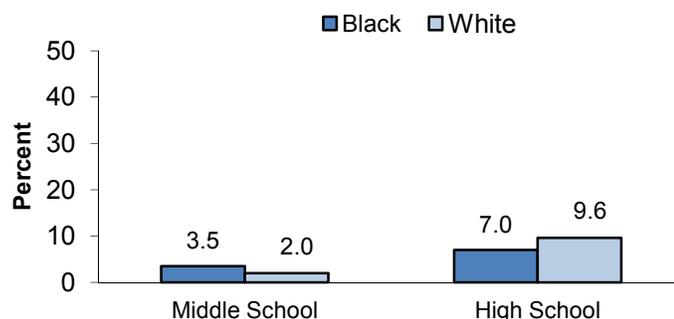

Figure 2. Current Cigar Use by Gender, 2015 Mississippi YTS

Current Cigar Use by Race

- In middle school, the percentage of students who were current cigar smokers was 3.5% among blacks and 2.0% among whites (Figure 3).
- In high school the percentage of students who were current cigar smokers was 7.0% among blacks and 9.6% among whites (Figure 3).

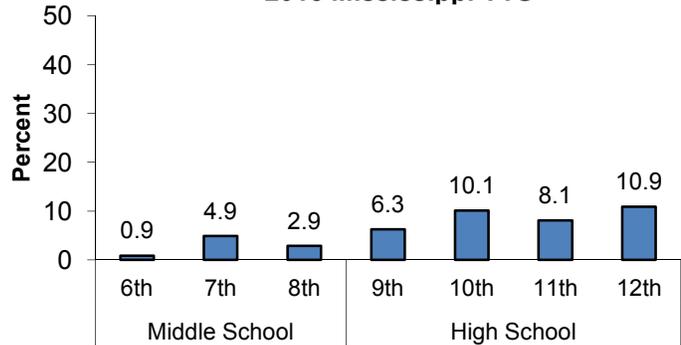

Figure 3. Current Cigar Use by Race, 2015 Mississippi YTS

Current Cigar Use by Grade Level

- In middle school, the percentage of current cigar smokers among students in 7th grade (4.9%) was significantly higher compared to 6th grade (0.9%) (Figure 4).
- In high school, there were no significant differences in the percentage of current cigar smokers among different grade levels (Figure 4).

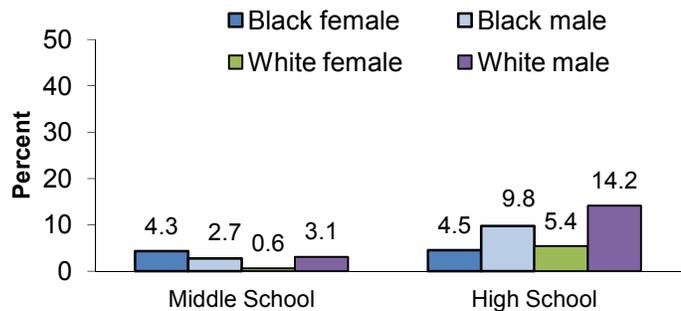

Figure 4. Current Cigar Use by Grade Level, 2015 Mississippi YTS

Current Cigar Use by Gender and Race

- In middle school, the percentage of current cigar smokers was significantly lower among white females (0.6%) compared to other gender by race groups (Figure 5).
- In high school, the percentage of current cigar smokers was significantly higher among white males (14.2%) compared to white and black females (Figure 5).

Trends in Current Cigar Use

The prevalence of current cigar use in middle and high school significantly decreased in the period of 2000–2015 (Figure 6).

Figure 6. Trends in Current Cigar Use, 2000–2015 Mississippi YTS

*The YTS was conducted in 2002, but did not include a question about youth cigar smoking.

- Notes**
- The difference between two estimates is considered statistically significant (also stated as “significant” in this fact sheet) if their 95% confidence intervals do not overlap.
 - Logistic regression analysis is used to test for change over time. The regression models controlled for changes in distributions by sex, race/ethnicity, and grade in the population and assessed linear and quadratic time effect by including time variables using thirteen years of data (2000, 2002–2004, 2006, and 2008–2015). We did not receive data in 2001, 2005, and 2007. However, the linear and quadratic terms were hypothetically assigned to those years so the overall trend analysis took into account any unequal elapsed time. The trend was considered statistically significant if the p-value for the linear time coefficient was less than 0.05.
