SUMMARY OF FINDINGS

Adverse Childhood Experiences in Mississippi

- Adverse childhood experiences (ACEs) are potentially traumatic events that occur during childhood.
- Approximately **1 in 5 adults** (21.7%) reported having experienced 4 or more ACEs in Mississippi in 2021.
- Experiencing 4+ ACEs was found to be higher among **women**, adults who were a race/ethnicity **other than non-Hispanic White or non-Hispanic Black**, **younger adults**, adults with **lower education levels**, and adults with **lower annual household incomes**.
- The most frequently reported ACEs were parental separation or divorce (reported by 37.3% of adults), emotional abuse (25.8%), and alcohol misuse in the childhood household (23.0%).

Mississippi adults who reported 4 or more ACEs have significantly higher odds of the following:

Important Information

About BRFSS

- The Mississippi Behavioral Risk Factor Surveillance System (BRFSS) is conducted annually to monitor the prevalence of behaviors that contribute to the leading causes of morbidity and mortality among adults in our state.
- The 2021 Mississippi BRFSS was completed by 4,421 Mississippians aged 18 years or older.

About This Report

- The estimates in this report are weighted.
- Some estimates in this report are based on a numerator of fewer than 20 non-weighted respondents, which can result in wide confidence intervals and unreliable estimates. Use caution when interpreting and comparing these estimates. Unweighted counts for each estimate are included in each topic’s respective data table.
- For BRFSS data, CDC recommends not interpreting percentages where the denominator is based upon fewer than 50 non-weighted respondents or the relative standard error (RSE) of the estimate is greater than 30%. In the tables of this report, results replaced with a dash (-) indicate a sample size of less than 50 or an RSE greater than 30%.
- The difference between two estimates is considered statistically significant (also stated as “significantly higher/lower” or “significant” in this report) if the 95% confidence intervals do not overlap.
- In this report, “Other Races/Ethnicities” refers to adults who reported their race/ethnicity as anything other than White, Non-Hispanic (NH) or Black, NH.
- In the 2021 MS BRFSS, the numbers of responses for individual races and ethnicities contained in the “Other Races/Ethnicities” demographic group (Table A, below) were too low to allow for meaningful estimates. To request additional race/ethnicity data, please submit a data request using [MSDH's online form](#).

Table A. Races and Ethnicities Included in the “Other Races/Ethnicities” Demographic Group

Race/Ethnicity	TOTAL 2021 SURVEY SAMPLE		
	Unweighted Total	Weighted Total	Weighted Percent
American Indian or Alaskan Native, Non-Hispanic	29	17,686	0.78
Asian, Non-Hispanic	21	17,235	0.76
Any race, Hispanic	39	53,067	2.34
Multiracial, Non-Hispanic	18	19,757	0.87
Native Hawaiian or Pacific Islander, Non-Hispanic	4	2,960	0.13
Other race, Non-Hispanic	32	23,092	1.02
Total “Other Races/Ethnicities” Demographic Group	143	133,797	5.90

Survey Questions for Each Topic in This Report (2021 MS BRFSS Survey)

The adverse childhood experiences (ACE) questions referred to the time period **before the respondent was 18 years of age**. All ACE questions were included in Optional Module 20: Adverse Childhood Experiences and were asked of all respondents.

ACE SCORE

Each respondent's ACE score was calculated by summing the number of household challenge (6), abuse (3), and neglect (2) ACEs the respondent reported experiencing. The possible scores ranged from 0 to 11. ACE scores were calculated for respondents who were missing answers to some of the ACE questions but were not calculated for respondents who were missing answers to all ACE questions.

HOUSEHOLD CHALLENGES

- **Mental Illness in Household:** *Did you live with anyone who was depressed, mentally ill, or suicidal?*
- **Alcohol Misuse in Household:** *Did you live with anyone who was a problem drinker or alcoholic?*
- **Drug Misuse in Household:** *Did you live with anyone who used illegal street drugs or who abused prescription medications?*
- **Incarcerated Household Member:** *Did you live with anyone who served time or was sentenced to serve time in a prison, jail, or other correctional facility?*
- **Parental Separation or Divorce:** *Were your parents separated or divorced?*
- **Intimate Partner Violence:** *How often did your parents or adults in your home ever slap, hit, kick, punch or beat each other up?*

ABUSE

- **Physical Abuse:** *Not including spanking, (before age 18), how often did a parent or adult in your home ever hit, beat, kick, or physically hurt you in any way?*
- **Emotional Abuse:** *How often did a parent or adult in your home ever swear at you, insult you, or put you down?*
- **Sexual Abuse** (counted as 1 ACE):
 - *How often did anyone at least 5 years older than you or an adult ever touch you sexually?*
 - *How often did anyone at least 5 years older than you or an adult try to make you touch them sexually?*
 - *How often did anyone at least 5 years older than you or an adult force you to have sex?*

NEGLECT

- **Emotional Neglect:** *For how much of your childhood was there an adult in your household who made you feel safe and protected?*
- **Physical Neglect:** *For how much of your childhood was there an adult in your household who tried hard to make sure your basic needs were met?*

ACE Score: Number of Adverse Childhood Experiences

OVERALL (FIGURE 1.1)

- Approximately 1 in 5 adults (21.7%) reported experiencing 4 or more adverse childhood experiences (ACEs).

SEX (FIGURE 1.2)

- The percentage of experiencing 4 or more ACEs was **significantly higher** among **women** (25.0%) compared to men (18.0%).

RACE/ETHNICITY (FIGURE 1.3)

- The percentage of experiencing 4 or more ACEs was **significantly higher** among adults of **other races/ethnicities** (33.6%) compared to Black, NH adults (18.3%). The percentage among White, NH adults (23.0%) was not significantly different from either of the other race/ethnicity groups.

AGE (FIGURE 1.4)

- The percentage of experiencing 4 or more ACEs increased as age decreased and was **significantly higher** among adults aged **18-24 years** (34.3%) compared to adults aged 45-54 (22.4%), 55-64 (18.5%), and 65+ years (11.2%).

EDUCATIONAL ATTAINMENT (FIGURE 1.5)

- The percentage of experiencing 4 or more ACEs was **significantly higher** among adults who completed **some college post-high school** (23.9%) compared to adults who graduated college (16.3%).

ANNUAL HOUSEHOLD INCOME (FIGURE 1.6)

- Overall, the percentage of experiencing 4 or more ACEs increased as annual household income decreased and was **significantly higher** among adults whose annual household income was **less than \$15,000** (29.9%) compared to adults who earned \$75,000 or more (17.8%).

Mental Illness in Household

OVERALL

- Approximately 1 in 6 adults (16.7%) reported that, before they turned 18 years old, they lived with someone who was depressed, mentally ill, or suicidal.

SEX (FIGURE 2.1)

- The percentage of living with someone with mental illness was **significantly higher** among **women** (19.1%) compared to men (13.9%).

RACE/ETHNICITY (FIGURE 2.2)

- The percentage of living with someone with mental illness was **significantly higher** among **White, NH adults** (20.3%) compared to Black, NH adults (10.0%). The percentage among adults of other races/ethnicities (22.1%) was not significantly different from either of the other race/ethnicity groups.

AGE (FIGURE 2.3)

- The percentage of living with someone with mental illness increased as age decreased and was **significantly higher** among adults aged **18-24 years** (33.7%) compared to adults aged 35-44 (17.7%), 45-54 (16.0%), 55-64 (11.6%), and 65+ years (7.6%).

EDUCATIONAL ATTAINMENT (FIGURE 2.4)

- There were **no statistically significant differences** in the percentage of living with someone with mental illness among education level groups.

ANNUAL HOUSEHOLD INCOME (FIGURE 2.5)

- There were **no statistically significant differences** in the percentage of living with someone with mental illness among annual household income groups.

Alcohol Misuse in Household

OVERALL

- Approximately 1 in 4 adults (23.0%) reported that, before they turned 18 years old, they lived with someone who was a problem drinker or alcoholic.

SEX (FIGURE 3.1)

- The percentage of living with someone who misused alcohol was **higher** among **women** (24.3%) compared to men (21.6%); however, the difference was **not statistically significant**.

RACE/ETHNICITY (FIGURE 3.2)

- The percentage of living with someone who misused alcohol was **significantly higher** among **adults of other races/ethnicities** (33.1%) and **White, NH adults** (25.7%) compared to Black, NH adults (17.5%).

AGE (FIGURE 3.3)

- The percentage of living with someone who misused alcohol was **highest** among adults aged 18-24 years (26.7%); however, there were **no statistically significant differences** in percentage among age groups.

EDUCATIONAL ATTAINMENT (FIGURE 3.4)

- The percentage of living with someone who misused alcohol increased as level of education decreased and was **significantly higher** among adults with **less than a high school education** (31.3%) compared to adults who completed some college post-high school (21.4%) and adults who graduated college (19.5%).

ANNUAL HOUSEHOLD INCOME (FIGURE 3.5)

- The percentage of living with someone who misused alcohol was **highest** among adults whose annual household income was less than \$15,000 (28.2%); however, there were **no statistically significant differences** in percentage among annual household income groups.

Drug Misuse in Household

OVERALL

- Approximately 1 in 8 adults (12.1%) reported that, before they turned 18 years old, they lived with someone who used illegal street drugs or who abused prescription medications.

SEX (FIGURE 4.1)

- The percentage of living with someone who misused drugs was **higher** among **women** (13.4%) compared to men (10.6%); however, the difference was **not statistically significant**.

RACE/ETHNICITY (FIGURE 4.2)

- The percentage of living with someone who misused drugs was **highest** among **adults of other races/ethnicities** (16.3%), followed by White, NH adults (13.2%), and Black, NH adults (9.9%); however, the differences were **not statistically significant**.

AGE (FIGURE 4.3)

- The percentage of living with someone who misused drugs increased as age decreased and was **significantly higher** among adults aged **18-24 years** (21.6%) and **25-34 years** (16.5%) compared to adults aged 55-64 years (9.1%) and 65+ years (5.1%).

EDUCATIONAL ATTAINMENT (FIGURE 4.4)

- The percentage of living with someone who misused drugs was **significantly lower** among adults who **graduated college** (7.3%) compared to adults with less than a high school education (13.7%), adults whose highest level of education was high school graduation (13.7%), and adults who completed some college post-high school (12.8%).

ANNUAL HOUSEHOLD INCOME (FIGURE 4.5)

- The percentage of living with someone who misused drugs was **highest** among adults whose annual household income was **less than \$15,000** (13.7%); however, there were **no statistically significant differences** in the percentage among annual household income groups.

Incarcerated Household Member

OVERALL

- Approximately 1 in 10 adults (9.9%) reported that, before they turned 18 years old, they lived with someone who served time or was sentenced to serve time in a prison, jail, or other correctional facility.

SEX (FIGURE 5.1)

- The percentage of living with someone who had been incarcerated was **higher** among **women** (10.4%) compared to men (9.4%); however, the difference was **not statistically significant**.

RACE/ETHNICITY (FIGURE 5.2)

- The percentage of living with someone who had been incarcerated was **significantly higher** among **Black, NH adults** (12.7%) compared to White, NH adults (7.8%). The percentage among adults of other races/ethnicities (15.1%) was not statistically significantly different from either of the other race/ethnicity groups.

AGE (FIGURE 5.3)

- The percentage of living with someone who had been incarcerated increased as age decreased and was **significantly higher** among adults aged **18-24 years** (23.5%) compared to adults aged 35-44 (9.7%), 45-54 (9.3%), 55-64 (5.9%), and 65+ years (2.9%).

EDUCATIONAL ATTAINMENT (FIGURE 5.4)

- The percentage of living with someone who had been incarcerated was **significantly lower** among adults who **graduated college** (4.5%) compared to adults of all lower education level groups.

ANNUAL HOUSEHOLD INCOME (FIGURE 5.5)

- Overall, the percentage of living with someone who had been incarcerated increased as annual household income decreased and was **significantly higher** among adults who earned **\$15,000 to \$24,999** (14.3%) and **\$25,000 to \$34,999** (13.8%) compared to adults whose annual household income was \$75,000 or more (5.9%).

Parental Separation or Divorce

Respondents who reported that their parents were not ever married were not included in these analyses.

OVERALL

- Approximately 3 in 8 adults (37.3%) reported that, before they turned 18 years old, their parents were separated or divorced.

SEX (FIGURE 6.1)

- The percentage of having parents who were separated or divorced was **higher** among **men** (38.6%) compared to women (36.1%); however, the difference was **not statistically significant**.

RACE/ETHNICITY (FIGURE 6.2)

- The percentage of having parents who were separated or divorced was **significantly higher** among **Black, NH adults** (45.5%) compared to White, NH adults (32.4%). The percentage among adults of other races/ethnicities (44.2%) was not statistically significantly different from either of the other race/ethnicity groups.

AGE (FIGURE 6.3)

- The percentage of having parents who were separated or divorced increased as age decreased and was **significantly higher** among adults aged **18-24 years** (60.8%) compared to adults aged 35-44 (45.1%), 45-54 (37.1%), 55-64 (29.6%), and 65+ years (17.7%).

EDUCATIONAL ATTAINMENT (FIGURE 6.4)

- Overall, the percentage of having parents who were separated or divorced increased as level of education decreased and was **significantly lower** among adults who **graduated college** (26.6%) compared to adults of all lower education level groups.

ANNUAL HOUSEHOLD INCOME (FIGURE 6.5)

- The percentage of having parents who were separated or divorced was **significantly higher** among adults who earned **less than \$15,000** (45.1%) and **\$25,000 to \$34,999** (43.1%) compared to adults whose annual household income was \$75,000 or more (31.1%).

Intimate Partner Violence

In this report, intimate partner violence is defined as parents or adults in the child’s home who slapped, hit, kicked, punched, or beat each other up.

OVERALL

- Approximately 1 in 6 adults (16.1%) reported that, before they turned 18 years old, there was intimate partner violence in their household.

SEX (FIGURE 7.1)

- The percentage of experiencing intimate partner violence in the household was **significantly higher** among **women** (18.0%) compared to men (13.8%).

RACE/ETHNICITY (FIGURE 7.2)

- The percentage of experiencing intimate partner violence in the household was **highest** among adults of **other races/ethnicities** (19.6%) followed by White, NH adults (16.0%), and Black, NH adults (15.8%). However, there were **no statistically significant differences** in percentage among race/ethnicity groups.

AGE (FIGURE 7.3)

- Overall, the percentage of experiencing intimate partner violence in the household increased as age decreased and was **highest** among adults aged **18-24 years** (19.2%). However, there were **no statistically significant differences** in percentage among age groups.

EDUCATIONAL ATTAINMENT (FIGURE 7.4)

- The percentage of experiencing intimate partner violence in the household increased as level of education decreased and was **highest** among adults with **less than a high school education** (19.9%). However, there were **no statistically significant differences** in percentage among education level groups.

ANNUAL HOUSEHOLD INCOME (FIGURE 7.5)

- The percentage of experiencing intimate partner violence in the household was **significantly higher** among adults who earned **\$15,000 to \$24,999** (20.3%) compared to adults whose annual household income was \$50,000 to \$74,999 (11.6%) and \$75,000 or more (12.6%).

Physical Abuse

In this report, a respondent is considered to have experienced childhood physical abuse if they reported that their parents or adults in their home had ever hit, beat, kicked, or physically hurt them (not including spanking).

OVERALL

- Approximately 1 in 7 adults (14.0%) reported experiencing childhood physical abuse.

SEX (FIGURE 8.1)

- The percentage of experiencing childhood physical abuse was **higher** among **women** (14.3%) compared to men (13.8%); however, the difference was **not statistically significant**.

RACE/ETHNICITY (FIGURE 8.2)

- The percentage of experiencing childhood physical abuse was **significantly higher** among **White, NH adults** (15.3%) compared to Black, NH adults (10.8%). The percentage of childhood physical abuse among adults of **other races/ethnicities** (22.0%) was not significantly different from either of the other race/ethnicity groups.

AGE (FIGURE 8.3)

- The percentage of experiencing childhood physical abuse was **significantly higher** among adults aged **18-24 years** (18.1%) compared to adults aged 65+ years (10.3%).

EDUCATIONAL ATTAINMENT (FIGURE 8.4)

- The percentage of experiencing childhood physical abuse was **highest** among adults with **less than a high school education** (17.4%). However, there were **no statistically significant differences** in percentage among education level groups.

ANNUAL HOUSEHOLD INCOME (FIGURE 8.5)

- The percentage of experiencing childhood physical abuse was **highest** among adults whose annual household income was **less than \$15,000** (17.4%). However, there were **no statistically significant differences** in percentage among annual household income groups.

Emotional Abuse

In this report, a respondent is considered to have experienced childhood emotional abuse if they reported that their parents or adults in their home had ever sworn at them, insulted them, or put them down.

OVERALL

- Approximately 1 in 4 adults (25.8%) reported experiencing childhood emotional abuse.

SEX (FIGURE 9.1)

- The percentage of experiencing childhood emotional abuse was **higher** among **women** (27.0%) compared to men (24.4%); however, the difference was **not statistically significant**.

RACE/ETHNICITY (FIGURE 9.2)

- The percentage of experiencing childhood emotional abuse was **significantly higher** among **adults of other races/ethnicities** (36.6%) and **White, NH adults** (28.1%) compared to Black, NH adults (20.2%).

AGE (FIGURE 9.3)

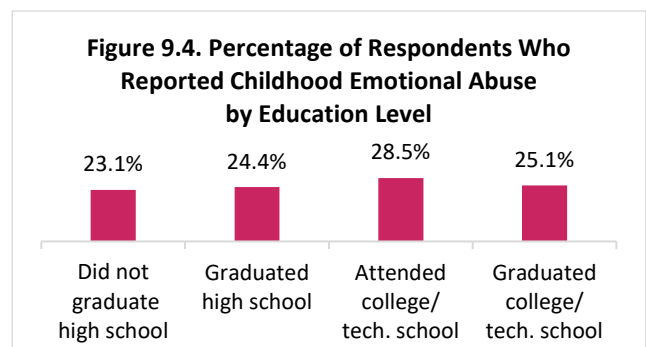

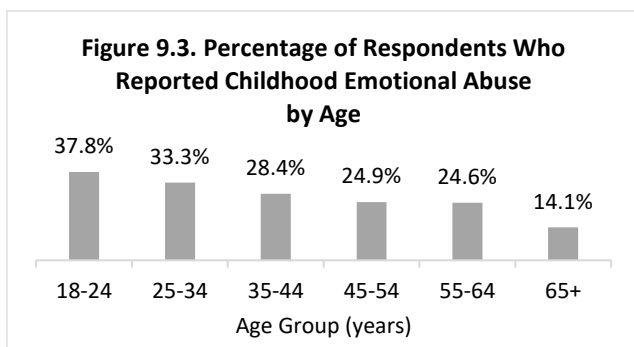

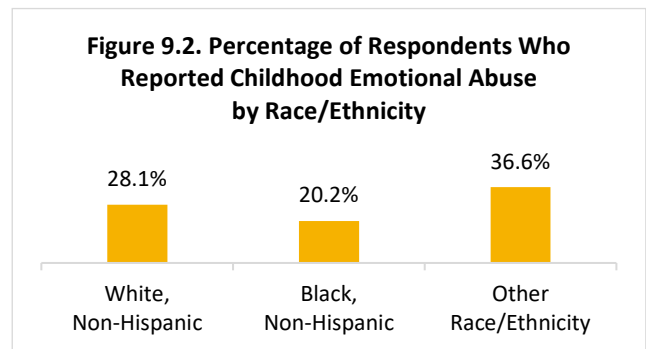

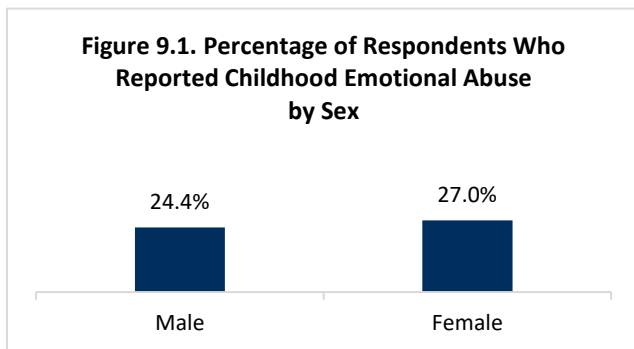

- The percentage of experiencing childhood emotional abuse increased as age decreased and was **significantly lower** among adults aged **65+ years** (14.1%) compared to all younger age groups.

EDUCATIONAL ATTAINMENT (FIGURE 9.4)

- The percentage of experiencing childhood emotional abuse was **highest** among adults who completed **some college post-high school** (28.5%). However, there were **no statistically significant differences** in percentage among education level groups.

ANNUAL HOUSEHOLD INCOME (FIGURE 9.5)

- The percentage of experiencing childhood emotional abuse was **highest** among adults whose annual household income was **\$75,000 or more** (28.8%). However, there were **no statistically significant differences** in percentage among annual household income groups.

Sexual Abuse

In this report, a respondent is considered to have experienced childhood sexual abuse if they reported that anyone at least 5 years older than they were or an adult ever touched them sexually, tried to make the respondent touch them sexually, or forced the respondent to have sex.

OVERALL

- Approximately 1 in 7 adults (14.1%) reported experiencing childhood sexual abuse.

SEX (FIGURE 10.1)

- The percentage of experiencing childhood sexual abuse was **significantly higher** among women (20.7%) compared to men (6.8%).

RACE/ETHNICITY (FIGURE 10.2)

- The percentage of experiencing childhood sexual abuse was **significantly higher** among adults of **other races/ethnicities** (27.1%) compared to White, NH adults (14.4%) and Black, NH adults (11.9%).

AGE (FIGURE 10.3)

- Overall, the percentage of experiencing childhood sexual abuse increased as age decreased and was **significantly lower** among adults aged **65+ years** (8.9%) compared to all younger age groups except the 35-44 years group (13.8%).

EDUCATIONAL ATTAINMENT (FIGURE 10.4)

- The percentage of experiencing childhood sexual abuse was **highest** among adults whose highest level of education was **high school graduation** (14.6%) and adults who completed **some college post-high school** (14.5%). However, there were **no statistically significant differences** in percentage among education level groups.

ANNUAL HOUSEHOLD INCOME (FIGURE 10.5)

- The percentage of experiencing childhood sexual abuse was **highest** among adults whose annual household income was **\$25,000 to \$34,999** (17.7%). However, there were **no statistically significant differences** in percentage among annual household income groups.

Emotional Neglect

In this report, a respondent is considered to have experienced childhood emotional neglect if they reported that there was not always an adult in the household who made them feel safe and protected.

OVERALL

- Approximately 1 in 5 adults (20.1%) reported experiencing childhood emotional neglect.

SEX (FIGURE 11.1)

- The percentage of experiencing childhood emotional neglect was **significantly higher** among **women** (22.4%) compared to men (17.5%).

RACE/ETHNICITY (FIGURE 11.2)

- The percentage of experiencing childhood emotional neglect was **highest** among **adults of other races/ethnicities** (26.8%) followed by White, NH adults (21.3%) and Black, NH adults (17.4%). However, there were **no statistically significant differences** in percentage among race/ethnicity groups.

AGE (FIGURE 11.3)

- Overall, the percentage of experiencing childhood emotional neglect increased as age decreased and was **significantly higher** among adults aged **18-24 years** (28.4%) compared to adults aged 55-64 years (17.3%) and 65+ years (16.7%).

EDUCATIONAL ATTAINMENT (FIGURE 11.4)

- The percentage of experiencing childhood emotional neglect was **highest** among adults with **less than a high school education** (23.5%). However, there were **no statistically significant differences** in percentage among education level groups.

ANNUAL HOUSEHOLD INCOME (FIGURE 11.5)

- Overall, the percentage of experiencing childhood emotional neglect increased as annual household income decreased and was **significantly higher** among adults whose annual household income was **less than \$15,000** (28.4%) compared to adults who earned \$75,000 or more (14.3%).

Physical Neglect

In this report, a respondent is considered to have experienced childhood physical neglect if they reported that there was not always an adult in the household who tried hard to make sure their basic needs were met.

OVERALL

- Approximately 1 in 8 adults (12.7%) reported experiencing childhood physical neglect.

SEX (FIGURE 12.1)

- The percentage of experiencing childhood physical neglect was **higher** among **women** (14.2%) compared to men (11.0%). However, the difference was **not statistically significant**.

RACE/ETHNICITY (FIGURE 12.2)

- The percentage of experiencing childhood physical neglect was **highest** among **adults of other races/ethnicities** (23.2%) followed by Black, NH adults (12.7%) and White, NH adults (11.9%). However, there were **no statistically significant differences** in percentage among race/ethnicity groups.

AGE (FIGURE 12.3)

- The percentage of experiencing childhood physical neglect was **highest** among adults aged **18-24 years** (15.8%). However, there were **no statistically significant differences** in percentage among age groups.

EDUCATIONAL ATTAINMENT (FIGURE 12.4)

- The percentage of experiencing childhood physical neglect increased as level of education decreased and was **significantly higher** among adults who **did not complete high school** (20.6%) compared to adults who completed some college post-high school (12.3%) and adults who graduated college (6.7%).

ANNUAL HOUSEHOLD INCOME (FIGURE 12.5)

- The percentage of experiencing childhood physical neglect increased as annual household income decreased and was **significantly higher** among adults whose annual household income was **less than \$15,000** (22.3%) compared to adults who earned \$50,000 to \$74,999 (10.1%) and \$75,000 or more (6.1%).

Analysis of Selected Indicators

CONSIDERATIONS

- When interpreting these results, it is important to keep in mind the existence of potential confounding factors, such as socioeconomic characteristics. For example, the percentage of having 4+ ACEs is highest among younger age groups, which also have higher rates of self-reported poor mental health.
- To help clarify the relationship between ACEs and the selected indicators, we have included results of logistic regression analyses. The odds ratios presented below were adjusted by age, race, sex, education level, and annual household income.

POOR PHYSICAL HEALTH

- The odds of having 14 days or more of poor physical health in the past 30 days among adults with 4+ ACEs are 2.0 (95% CI 1.5-2.7) times the odds for adults with 3 or fewer ACEs. In other words, the odds of having 14 days or more of poor physical health in the past 30 days are **increased by 100%** for adults with 4+ ACEs. This finding was **statistically significant**.

POOR MENTAL HEALTH

- The odds of having 14 days or more of poor mental health in the past 30 days among adults with 4+ ACEs are 2.3 (95% CI 1.8-3.1) times the odds for adults with 3 or fewer ACEs. The odds of having 14 days or more of poor mental health in the past 30 days are **increased by 130%** for adults with 4+ ACEs. This finding was **statistically significant**.

ASTHMA

- The odds of ever having asthma among adults with 4+ ACEs are 1.7 (95% CI 1.3-2.3) times the odds for adults with 3 or fewer ACEs. The odds of ever having asthma are **increased by 70%** for adults with 4+ ACEs. This finding was **statistically significant**.

CARDIOVASCULAR DISEASE (CVD)

- The odds of having CVD among adults with 4+ ACEs are 1.6 (95% CI 1.2-2.2) times the odds for adults with 3 or fewer ACEs. The odds of having CVD are **increased by 60%** for adults with 4+ ACEs. This finding was **statistically significant**.

DEPRESSION

- The odds of ever having depression among adults with 4+ ACEs are 3.5 (95% CI 2.8-4.5) times the odds for adults with 3 or fewer ACEs. The odds of ever having depression are **increased by 250%** for adults with 4+ ACEs. This finding was **statistically significant**.

HYPERTENSION

- The odds of having hypertension among adults with 4+ ACEs are 1.1 (95% CI 0.8-1.4) times the odds for adults with 3 or fewer ACEs. The odds of having hypertension are **increased by 10%** for adults with 4+ ACEs. This finding was **not statistically significant**.

OVERWEIGHT/OBESITY

- The odds of being overweight or obese among adults with 4+ ACEs are 1.2 (95% CI 0.9-1.5) times the odds for adults with 3 or fewer ACEs. The odds of having a sedentary lifestyle are **increased by 20%** for adults with 4+ ACEs. This finding was **not statistically significant**.

COGNITION-RELATED DISABILITY

- The odds of having a cognition-related disability among adults with 4+ ACEs are 2.1 (95% CI 1.6-2.7) times the odds for adults with 3 or fewer ACEs. The odds of having a cognition-related disability are **increased by 110%** for adults with 4+ ACEs. This finding was **statistically significant**.

CAREGIVING

- The odds of caregiving among adults with 4+ ACEs are 1.6 (95% CI 1.2-2.0) times the odds for adults with 3 or fewer ACEs. The odds of caregiving are **increased by 60%** for adults with 4+ ACEs. This finding was **statistically significant**.

CURRENT BINGE DRINKING

- The odds of current binge drinking among adults with 4+ ACEs are 1.4 (95% CI 1.03-1.97) times the odds for adults with 3 or fewer ACEs. The odds of current binge drinking are **increased by 40%** for adults with 4+ ACEs. This finding was **statistically significant**.

CURRENT CIGARETTE SMOKING

- The odds of current cigarette smoking among adults with 4+ ACEs are 1.8 (95% CI 1.4-2.3) times the odds for adults with 3 or fewer ACEs. The odds of current cigarette smoking are **increased by 80%** for adults with 4+ ACEs. This finding was **statistically significant**.

HIV TESTING

- The odds of ever having an HIV test among adults with 4+ ACEs are 1.7 (95% CI 1.3-2.1) times the odds for adults with 3 or fewer ACEs. The odds of ever having an HIV test are **increased by 70%** for adults with 4+ ACEs. This finding was **statistically significant**.

SEDENTARY LIFESTYLE

- The odds of having a sedentary lifestyle among adults with 4+ ACEs are 0.7 (95% CI 0.6-0.9) times the odds for adults with 3 or fewer ACEs. The odds of having a sedentary lifestyle are **decreased by 30%** for adults with 4+ ACEs. This finding was **statistically significant**.

SMOKING CESSATION

- The odds of trying to quit smoking cigarettes in the past year among adults with 4+ ACEs are 1.1 (95% CI 0.7-1.8) times the odds for adults with 3 or fewer ACEs. The odds of trying to quit smoking are **increased by 10%** for adults with 4+ ACEs. This finding was **not statistically significant**.

Figure 13.1. Adjusted Odds Ratios for Selected Indicators
 Adults with 4+ compared to baseline for adults with 3 or fewer ACEs
